

Project Status Report

Meeting Minutes & Updates

We began this week's status update meeting by discussing our remaining schedule and assessing the status of the project. We determined that the project is still on track to be completed as scheduled. We then discussed feedback on the previous status update.

We then reviewed the rubric for the final project and discussed the various criteria that we would like to meet. We discussed creating a robust final testing plan using unit tests to ensure the major functionality of the project is working as desired.

Finally, We briefly discussed our server and hosting requirements, and determined that some additional research will be necessary in order to determine which hosting platform will be best for our site.

Individual Contributions

Patrick: Led team meeting and took meeting minute notes. Re-designed post pop-up design to include links and media. Researched hosting options and determined Google will provide hosting for our site. Hosting details and implementation will be discussed at the next team meeting.

Shahla: Implemented search jobs functionality in Jobs page. Implemented Search Users functionality in the Feed page. Implemented Modals in Profile Page to add and edit Profile Picture, Banner Image, Experiences, Skills and General Information. Fixed bugs in the navigation bar. Implemented comments on the frontend. Styled modals for article posts. Styled modals for media posts. Created user profile component. This component would be displayed when the user clicks on any of the results while searching for users in feed page.

Sai: Redesigned UI/UX design for the "My Network" page on the Takeoff platform, utilizing Figma for implementation. The page features three columns with connection options, with the connect option for different people to connect that as name,photo of the person to connect etc a

unified post and comments tab for users, and four sections: Manage My Network, People to Connect, Follow, and Interests. The design emphasizes connecting with diverse individuals, including sections for new connections and contacts.

Daniel: Implemented job posting functionality, can now click on a job to see more details and a new section will appear on the right. Can bookmark jobs and remove bookmarks. Can create and delete comments on posts. Can see the latest 3 comments with username and timestamp on posts. Fixed article bug.

Qinfeng: Name and birthday information can now be saved to firebase. Implemented feature to show contact requests to me on the network page, and allow users to accept/reject/ignore this request. For the Profile page, users can now add/edit/delete experience and skills. User can upload avatar to profile page. User can send contact requests at profile page.

Khalid: All major components and functionalities were tested during this week's testing session. The UserProfile, App, and firebase components exhibited successful results, indicating that they are functioning as expected. No critical issues were identified during the testing phase.
